Chronic diseases — such as diabetes, HIV, hyperthyroidism, hypothyroidism, or a buildup of iron (hemochromatosis) or protein (amyloidosis) — also may contribute to heart failure. Causes of acute heart failure include viruses that attack the heart muscle, severe infections, allergic reactions, blood clots in the lungs, the use of certain ...

Heart failure - Symptoms and causes - Mayo Clinic

Coronary heart disease (CHD) is usually caused by a build-up of fatty deposits (atheroma) on the walls of the arteries around the heart (coronary arteries). The build-up of atheroma makes the arteries narrower, restricting the flow of blood to the heart muscle. This process is called atherosclerosis.

Coronary heart disease - Causes - NHS

Abnormal sounds of the heart caused by abnormal blood flow through the heart valves or major vessels and hear with a stethoscope Heart size is assessed by: Feeling for the point of major impact of the heart against the chest wall during systole, which is located close to the midclavicular line, between the 4th and 6th ribs, on the left side.

Pathophysiology of the Heart Flashcards | Quizlet

Please use one of the following formats to cite this article in your essay, paper or report: APA. Mandal, Ananya. (2019, February 26). Coronary Artery Disease Pathophysiology.

Coronary Artery Disease Pathophysiology

Cyanotic congenital heart disease (CCHD) is a condition present at birth. CCHD causes low levels of oxygen in the blood. A common symptom is a bluish tint to the skin, called cyanosis.

Cyanotic Congenital Heart Disease - Healthline

Precipitating causes: Overt heart failure may be precipitated by progression of the underlying heart disease (eg, further narrowing of a stenotic aortic valve or mitral valve) or various conditions (fever, anemia, infection) or medications (chemotherapy, nonsteroidal anti-inflammatory drugs [NSAIDs]) that alter the homeostasis of heart failure ...

Heart Failure - Diseases & Conditions - Medscape Reference

In affluent societies, coronary artery disease causes severe disability and more death than any other disease, including cancer. It manifests as angina, silent ischaemia, unstable angina, myocardial infarction, arrhythmias, heart failure, and sudden death. Coronary artery disease is almost always due to atheromatous narrowing and subsequent occlusion of the vessel.

Pathophysiology and investigation of coronary artery disease

Different types of heart diseases are a result of various types of causes – congenital, valvular or maybe just a cardiovascular disease. However, there's something common that flows through all – smoking, excessive consumption of alcohol, drug abuse, diabetes, stress, coronary arteries, high blood pressure and heart infections caused by ...
