Answers Acids, Bases, and Solutions

The salt crystal breaks up, forming positive and negative ions in the solution When table sugar dissolves in water, the sugar molecules separate from one another and become surrounded by water molecules, but no ions form 26 Lemons have a pH of about 2 and apples have a pH of about 3 A lemon is more acidic 27 Vinegar is an acid and ammonia

Protein aggregation in salt solutions

The physical processes of aggregation, especially in salt solutions, are not well understood We model a protein as having multiple binding sites to other proteins, leading to orientational variations, dependent on salt With few parameters and with knowledge of the cloud-point temperatures as a function of added salt, the model gives good
